

# Preventive advice on farms suffering from a high incidence of periparturient paresis

VEERkracht Dairy Congress 2019

Rik Hendriks

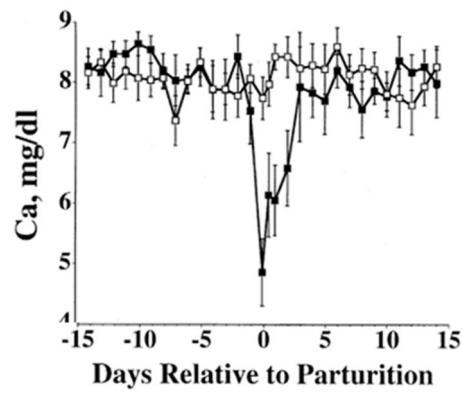

the Netherlands, January 31<sup>st</sup>

## What are we discussing?

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Hypocalcemia; a mammary gland problem

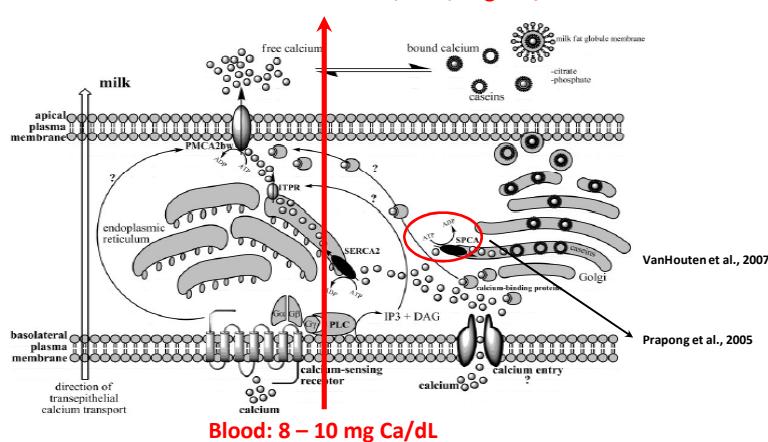

Concentrations of plasma calcium in intact (■)  
and mastectomized (□)  
cows around calving  
Goff et al., 2002

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Regulation of mammary calcium transport

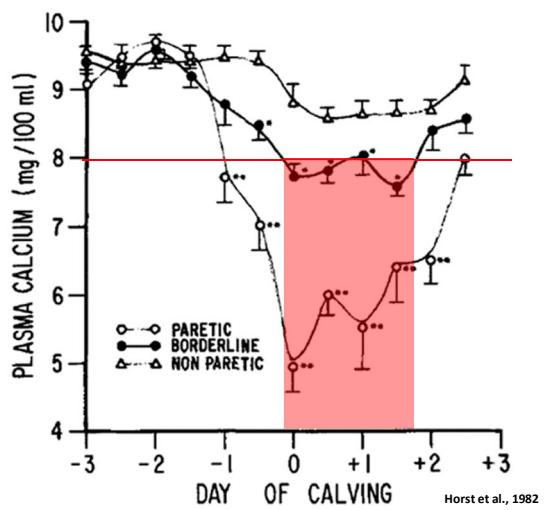

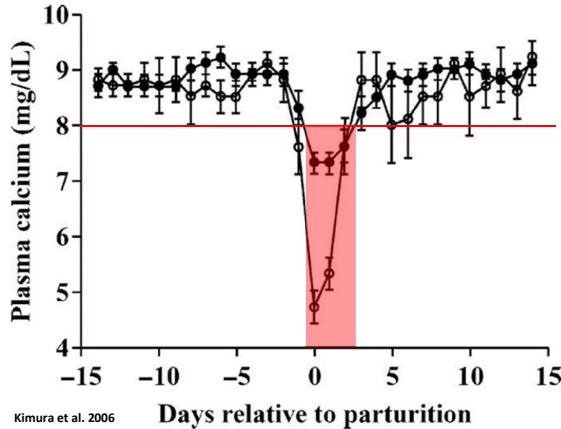

Colostrum: 170 -230 mg Ca/dL = 1,7 – 2,3 gr Ca/L (Goff, 2014)

Milk: 1,1 – 1,45 gr Ca/L (Hurtaud et al., 2011; Goff, 2014)

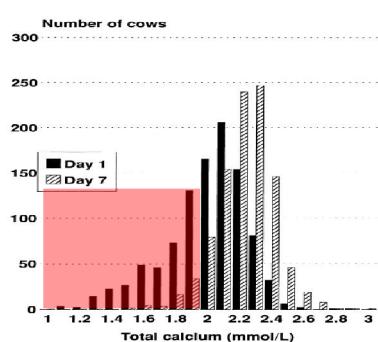

Rik Hendriks, VEERkracht Dairy Congress 2019, the  
Netherlands

## Hypocalcemia; should we worry?

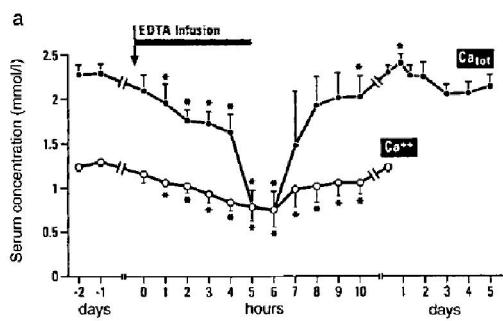

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Subclinical and clinical hypocalcemia

Serum  $\text{Ca}_{\text{tot}}$  concentrations of non-paretic cows on D1 and D7 postpartum.

Bigras-Poulin and Tremblay, 1998

Effects of a 5 hour  $\text{Na}_2\text{EDTA}$  infusion on the serum concentrations of  $\text{Ca}_{\text{tot}}$  and  $\text{iCa}^{++}$  six dairy cows.  
The arrow indicates the beginning of the infusion.

\*  $P < 0.05$

Riond et al., 1997

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Subclinical and clinical hypocalcemia

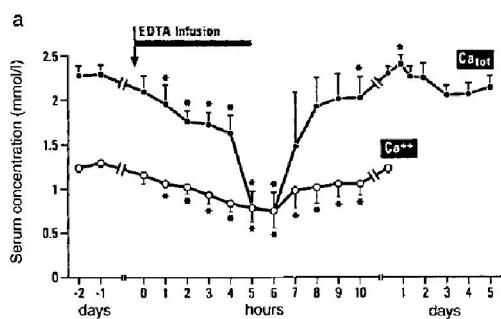

**If you want to measure**

**Think of when to measure**

**Don't measure just the outcome**  
(= blood calcium concentration)

**Also measure the cause!**

(= underlying mechanism)

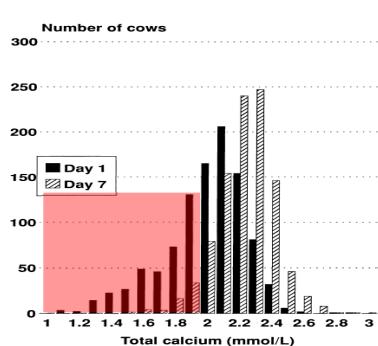

Effects of a 5 hour  $\text{Na}_2\text{EDTA}$  infusion on the serum concentrations of  $\text{Ca}_{\text{tot}}$  and  $\text{iCa}^{2+}$  six dairy cows.  
The arrow indicates the beginning of the infusion.

\*  $P < 0.05$

Riond et al., 1997

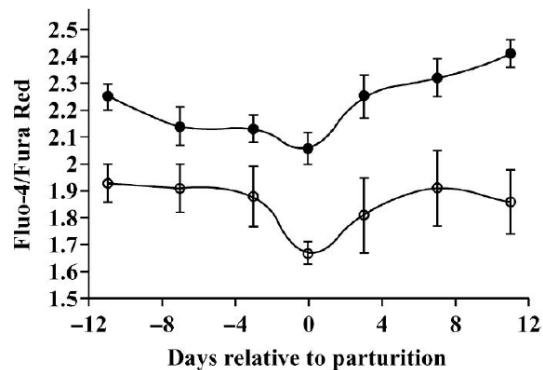

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Subclinical and clinical hypocalcemia

Serum  $\text{Ca}_{\text{tot}}$  concentrations of non-paretic cows on D1 and D7 postpartum.

Bigras-Poulin and Tremblay, 1998

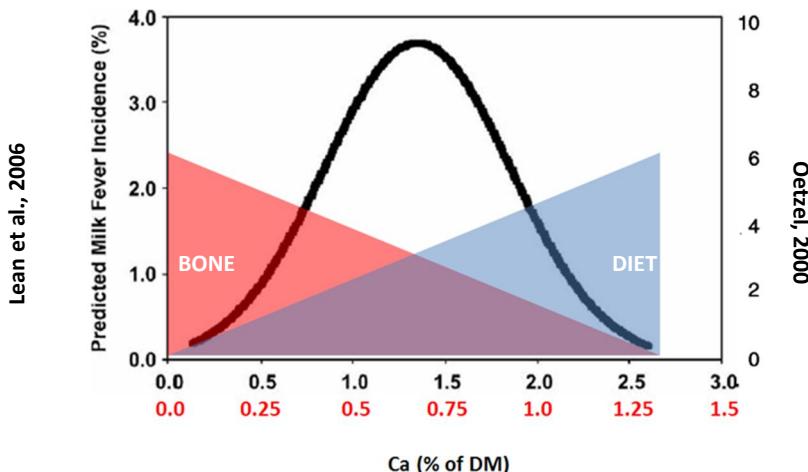

Flux of intracellular calcium in PMNC of cows with (●) and without (○) milkfever.

Kimura et al., 2006

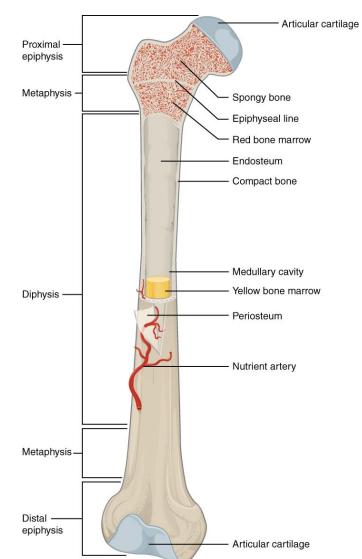

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Clinical (uncomplicated) hypocalcemia milk fever

## Calcium release from bone

- Bone:
  - PTH-dependent-system
  - Delay of 2-3 days
- Required:
  - Magnesium

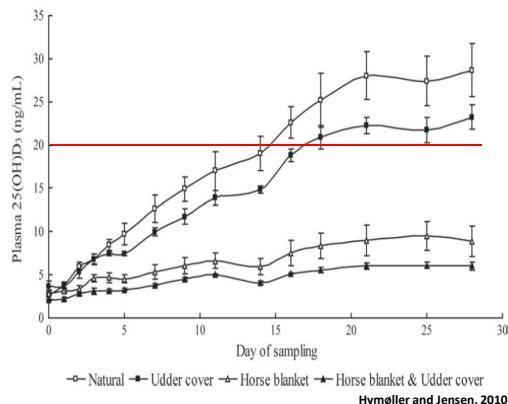

[https://en.wikipedia.org/wiki/Bone#/media/File:603\\_Anatomy\\_of\\_Long\\_Bone.jpg](https://en.wikipedia.org/wiki/Bone#/media/File:603_Anatomy_of_Long_Bone.jpg)

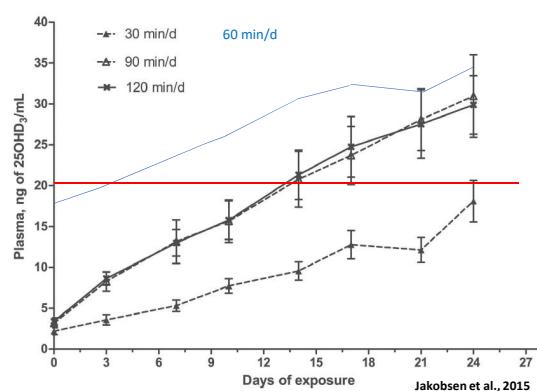

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: vitamin D

- Meeting the requirement with sunlight

- Meeting the requirement with artificial UV-B

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: magnesium

- Magnesium requirement:

- Dietary requirement 0.35-0.40% on DM basis to circumvent impaired absorption by high (>2%) dietary K  
Goff, 2014

- Magnesium absorption is stimulated by:
  - Enhanced rumen fermentation = *more protonated VFA* Gaebel et al., 1987; Leonhard-Marek et al., 2010
  - Increased Mg solubility at pH 5 (82%) 6 (53%) 7 (29%) Dalley et al., 1997

A proper close-up diet:

Enhancement of rumen fermentation!

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: monitoring

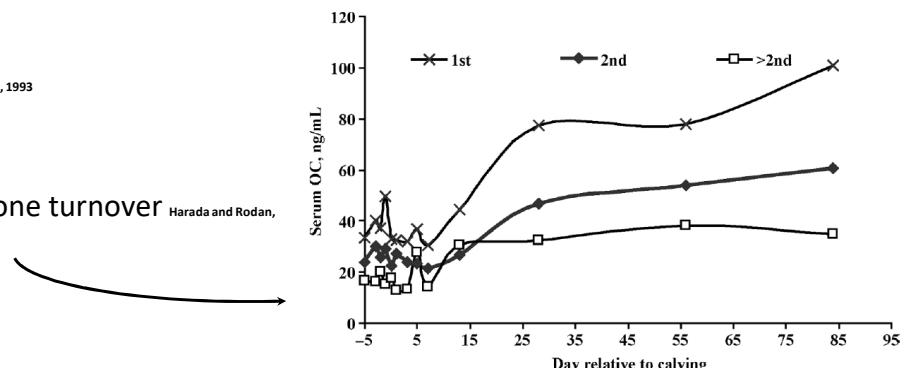

- Magnesium:
  - Measured in the urine
  - Reference range:  
 $[Mg] > 2.5 \text{ mg/dL}$  Schneider et al., 1985

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: additional measures

- Exercise?! Gustafson, 1993

- Stimulates bone turnover Harada and Rodan, 2003; Hinney et al., 2004

Effect of parity on serum osteocalcin (OC) concentration

Taylor et al., 2008

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: additional measures

- Compensated metabolic acidosis (= low blood bicarbonate) → no more delay in Ca replenishment
  - Negative DCAD Escobosa et al., 1984; Tucker et al., 1988; Oetzel, 1991; Roche et al., 2003; Penner et al., 2008

Uncompensated metabolic acidosis when low DCAD combined with factors shown to decrease blood bicarbonate

- Heat stress Schneider et al., 1984; 1988a; 1988b
- Rumen acidosis Morgante et al., 2009; De Nardi et al., 2013

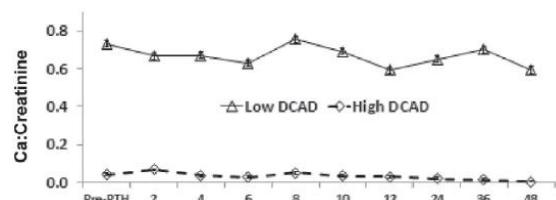

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from bone: additional measures

- Compensated metabolic acidosis (= low blood bicarbonate) → no more delay in Ca replenishment
  - Negative DCAD Escobosa et al., 1984; Tucker et al., 1988; Oetzel, 1991; Roche et al., 2003; Penner et al., 2008

Uncompensated metabolic acidosis when low DCAD combined with

- Heat stress Schneider et al., 1984; 1988a; 1988b
- Rumen acidosis Morgante et al., 2009; De Nardi et al., 2013

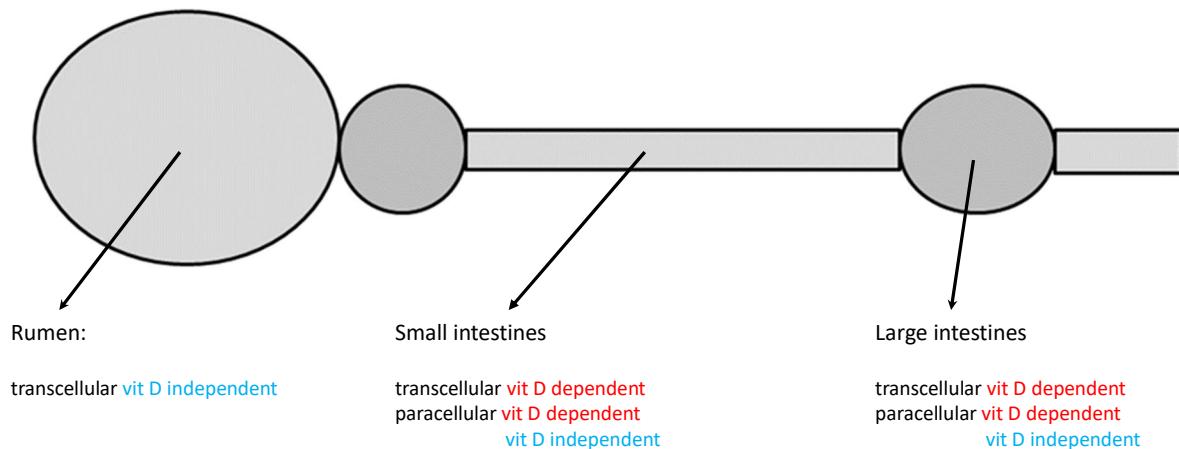

Urinary Ca:Creatinine ratio in cows fed a low DCAD and a high DCAD

Goff et al., 2014

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT

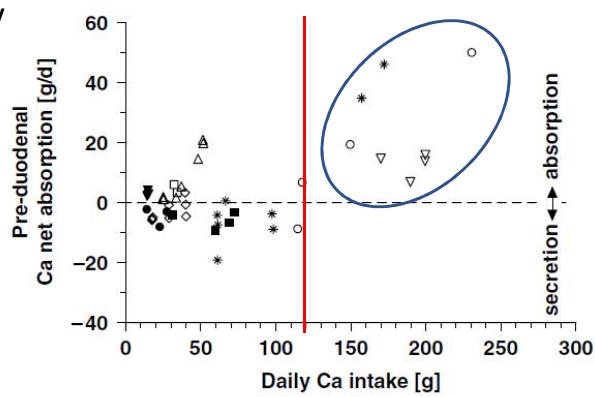

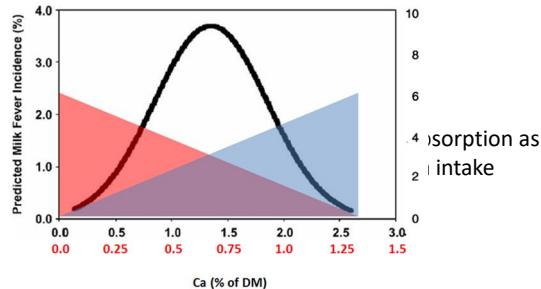

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: rumen

- Dietary Ca intake > 120 gr/day

Schröder and Brevis, 2006

- (at 10 kg daily DMI  $\approx$  1% Ca)

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: rumen

- Dietary chloride, possibly via the  $\text{Cl}^-/\text{HCO}_3^-$  exchanger in cooperation with the  $\text{Ca}^{2+}/\text{H}^+$  exchanger Leonhard-Marek et al., 2007; Wilkens et al., 2016

(Partially?!) decreased DCAD

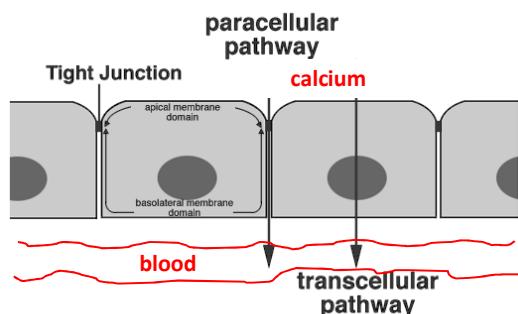

- Fermentation rate: increased VFA, especially butyrate, stimulates Ca absorption in the rumen Schröder et al., 1999

A proper close-up diet:  
Enhancement of rumen fermentation  
Dietary inclusion of sugars

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: intestines

- PTH/VitD dependent (paracellularly AND transcellularly)

<http://www3.mfour.med.kyoto-u.ac.jp/~htsukita/new-pub/NatBox1.html>

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from the GIT: vitamin D dependent

- Requirement:

- Feed: 20.000 – 30.000 IU/day Goff, 2004

- UV-B:

- Artificial Jakobsen et al., 2015
  - > 14 days, minimal 90 minutes/day
- Sun Hymøller et al. 2009, Hymøller and Jensen, 2010, 2012
  - Summer (Denmark) > 14 days, 5 hrs sun/day
- Days of exposure needed to reach reference value also depend on basal level

Hymøller and Jensen, 2010

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium release from GIT: vitamin D dependent

- Vitamin D:

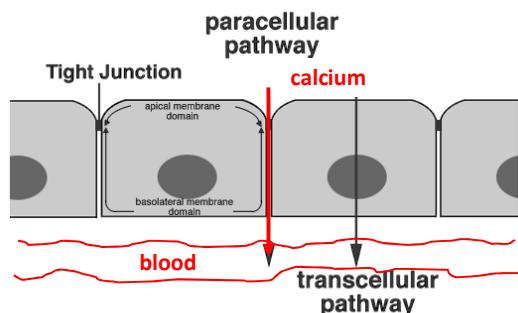

- Measured in the blood as [25(OH)D<sub>3</sub>]
- Reference range:

[25(OH)D<sub>3</sub>] 20 – 50 ng/mL Horst et al. 1994

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: intestines

- PTH/vitD independent (paracellularly)
  - Ca-gradient
  - “Open” tight junctions; Claudin 2, 12 or 15 Chirayat et al., 1998; Amsheh et al., 2000; Fujita et al., 2008; Diaz de Barboza et al., 2015

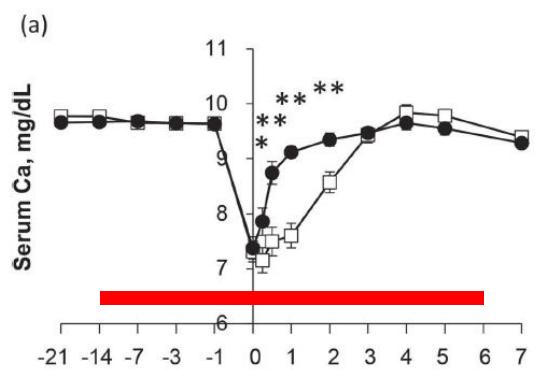

<http://www3.mfour.med.kyoto-u.ac.jp/~htsukita/new-pub/NatBox1.html>

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: intestines

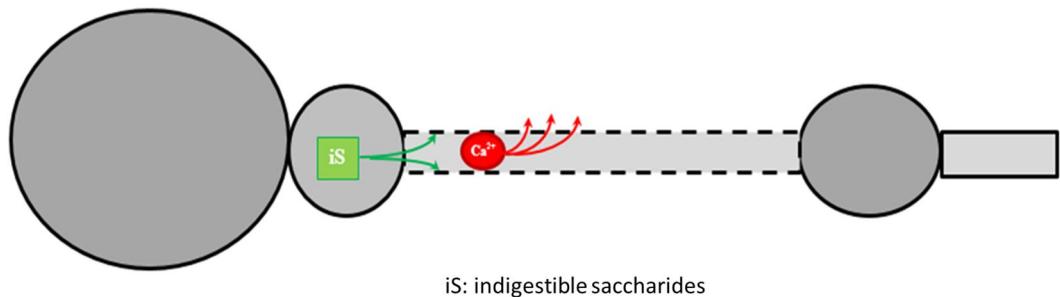

- PTH/vitD independent (paracellularly)
  - Role of oligofructose and difructose anhydrides (DFA)? Mineo et al., 2001; Sato et al., 2007 Abstr.; Teramura et al., 2015a,b
  - In combination with dietary Ca!!

Serum concentrations of Ca in transition cows supplemented without (□) and with (●) 40 gr DFA-III/cow/day (red bar: DFA-feeding) Teramura et al. 2015b

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

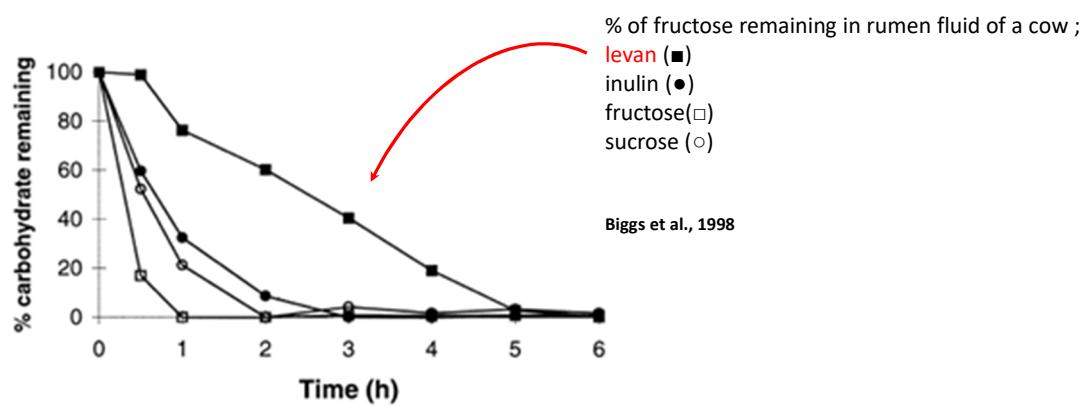

## Calcium absorption from the GIT: intestines

iS: indigestible saccharides

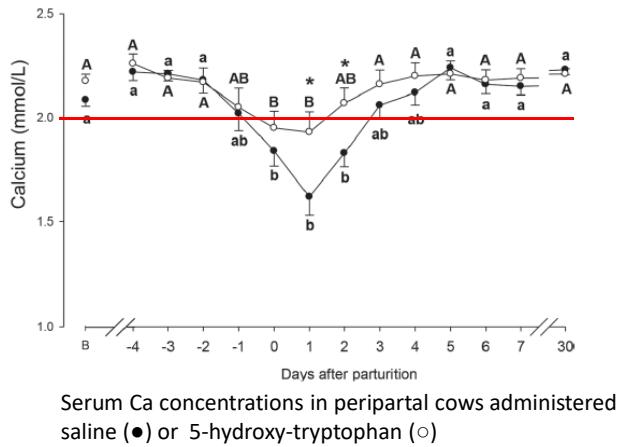

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: intestines

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: serotonin-effect

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: serotonin-effect

- Do we see serotonin-effect in the Netherlands??
- Predominantly produced in the Entero Chromaffine cells in the GIT, by Duodenal fructose and colonic glucose Zelkas et al., 2015; Martin et al., 2017
- Cows with high blood serotonin produce less colostrum Kessler et al., 2018

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Clinical (uncomplicated) hypocalcemia

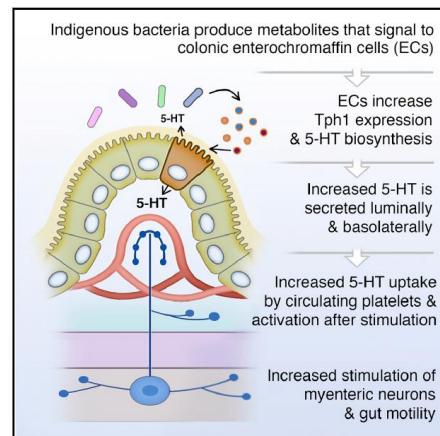

- Prevention:
  - Aim at more than 1 (sub)system

- Bone:
  - Exercise
  - Magnesium
  - Negative DCAD (in the Netherlands?!!)
- Diet
  - Magnesium
  - Vitamin D → diet / light
  - Calcium
  - Fructose?
  - Enhancement of fermentation in close-up period

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Calcium absorption from the GIT: serotonin-effect

- Do we see serotonin-effect in the Netherlands??
  - The GIT microbiome ultimately regulates serotonin synthesis Yano et al., 2015
  - Predominantly produced in the EC cells in the GIT, by
    - Luminal glucose Zelkis et al., 2015
    - **Duodenal fructose** and colonic glucose Martin et al., 2017
    - Mechanical strain Chin et al., 2012
  - Higher serotonin levels after calcitriol injection Vieira-Nieto et al., 2017
  - Cows with high blood serotonin produce less colostrum Kessler et al., 2018

Yano et al., 2015

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

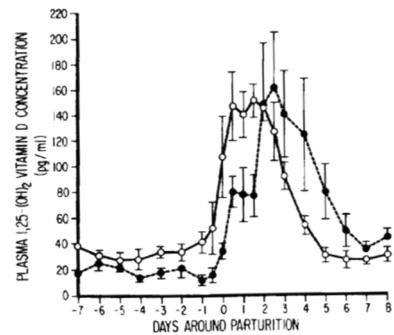

## Complicated hypocalcemia

- Definition?
  - Multiple treatments necessary?
  - Younger animals: 2nd & 3rd parity?
  - Occurrence > 3 days in lactation?
  - Sustained drain of calcium??
  - Altered setpoint for restoring hypocalcemia ??

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Complicated hypocalcemia

- Definition?
  - Relapsing cases?
  - Multiple treatments necessary?
  - Younger animals: 2nd & 3rd parity?
  - Occurrence > 2-3 days in lactation?
  - Sustained drain of calcium??
  - Altered setpoint for hypocalcemia ??

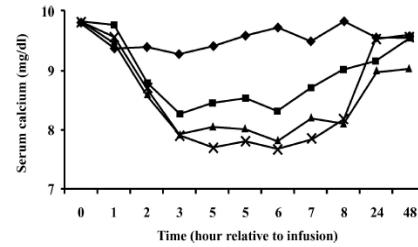

Plasma calcitriol in cows with relapsing and non-relapsing milkfever.

Goff et al., 1989

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Complicated hypocalcemia: calcium drain

- Pro-inflammatory cytokines are causative
  - I.v. LPS administration decreases  $\text{Ca}_{\text{tot}}$  Griel et al., 1975; Waldron et al., 2003
  - I.v. LPS administration decreases  $\text{iCa}^{2+}$  Elsasser et al., 1996; Kvidera et al., 2016
  - Milk fever cows with LPS in the peripheral blood Aiumlamai et al., 1992
  - Cows with *E. coli* mastitis have decreased  $\text{Ca}_{\text{tot}}$  Griel et al., 1975
  - Cows with rumen acidosis have decreased  $\text{iCa}^{2+}$  Danscher et al., 2015; Aditya et al., 2018
  - Horses with enterocolitis have decreased  $\text{iCa}^{2+}$  Toribio et al., 2001
  - Sheep with septic shock have decreased  $\text{Ca}_{\text{tot}}$  Cumming, 1994

I.v. LPS administration decreases serum  $\text{Ca}_{\text{tot}}$  in a dose dependent way

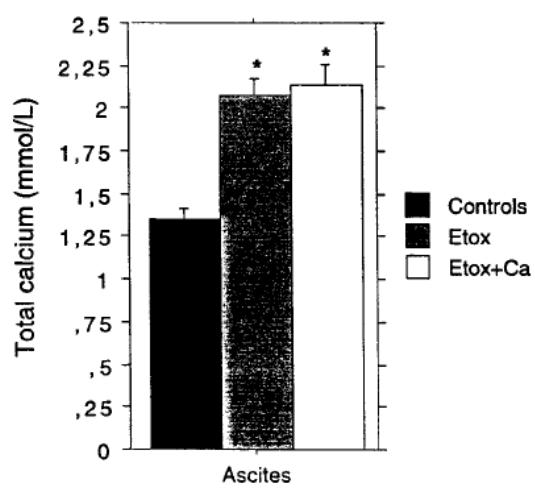

Waldron et al., 2003

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Complicated hypocalcemia; calcium drain

- Shift of blood calcium
  - to interstitial fluid Carstedt et al. 2000

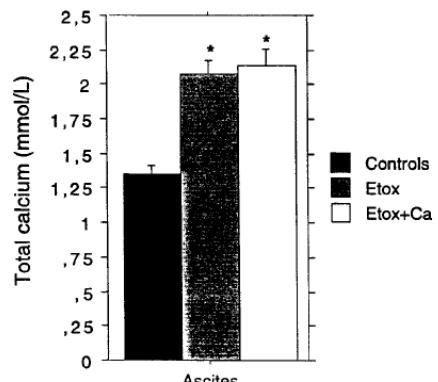

$\text{Ca}_{\text{tot}}$  in ascites of pigs treated with saline, endotoxin, or endotoxin with calcium Carstedt et al., 2000

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Complicated hypocalcemia; calcium drain

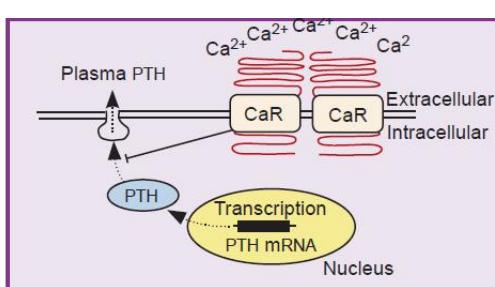

- Shift of blood calcium
  - to interstitial fluid Carlstedt et al., 2000
  - to intracellular Sayeed, 1986
    - cell apoptosis ?!
    - e.g. in cardiomyosites?!
- In Downer cows:
  - Arrhythmia Yamagishi et al., 1999; Peek et al., 2000
  - Myocardial necrosis Yamagishi and Naito, 1997; Yamagishi et al., 1999
  - Tachycardia Yamagishi et al., 1999; Labontée et al., 2018
  - Increased cardiac troponin I Serra et al., 2000; Labontée et al., 2018

$\text{Ca}_{\text{tot}}$  in ascites of pigs treated with saline, endotoxin, or endotoxin with calcium Carlstedt et al., 2000

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Complicated hypocalcemia; altered setpoint

Ionized calcium occupies the CaSR which acts inhibitory on PTH secretion.

Murray et al. 2008

- Impaired calcium homeostasis:
  - CaSR in parathyroid gland:
    - mRNA upregulation after 48 hrs IL-1 $\beta$  in vitro Nielsen et al., 1997
    - mRNA upregulation and increased expression of CaSR in chief cells after burn injury *ex vivo* in sheep Murphy et al., 2000
  - PTH secretion from bovine parathyroid glands is:
    - decreased *in vitro* after 24 hrs IL-6 Carlstedt et al., 1999
    - decreased *in vitro* after 48 hrs IL-1 $\beta$  Nielsen et al., 1997
  - Setpoint for hypocalcemia is changed?

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Downer Cow Syndrome (DCS)

- Definition Menard and Thompson, 2007

- Cows recumbent for > 24 hours
- Cows recumbent after > 3 treatments
- plus
- No skeletal or muscular damage

- Known associations:

- Hypophosphatemia = **association!**
- Hypokalemia = **association!**
- Others = **associations!**

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## Downer Cow Syndrome (DCS)

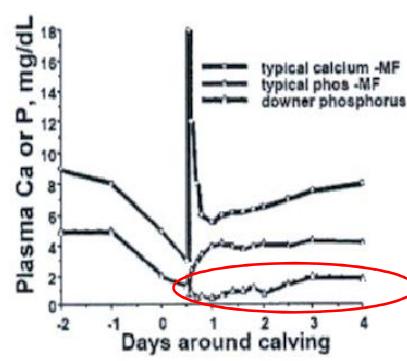

- Known associations with:

- Hypophosphatemia + hypocalcemia

Yamagishi and Naito, 1997; Menard and Thompson, 2007; Kalaitzakis et al. 2010

- Hypophosphatemia and normocalcemia

Oikawa and Katoh, 2002

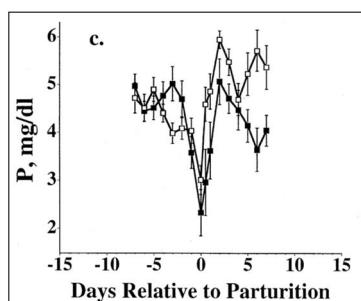

Source: Anonymous

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS and hypophosphatemia

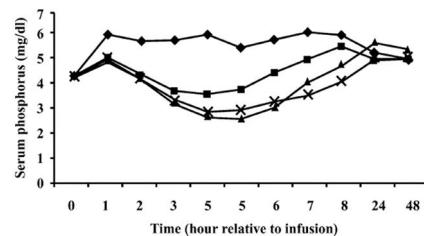

- Peripartal hypophosphatemia is physiological

Serum P in intact (■) and mastectomized (□) periparturient cows

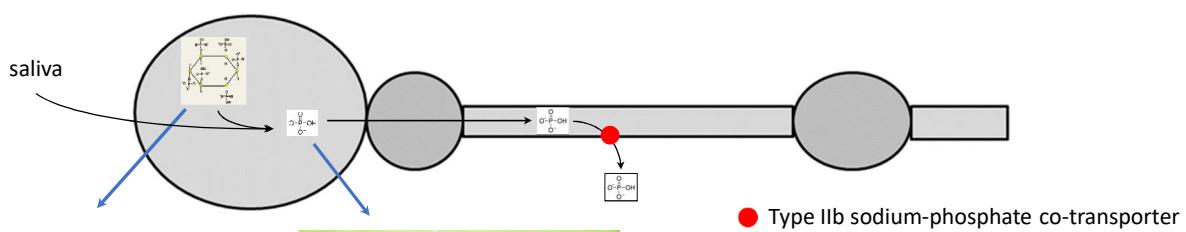

Goff et al., 2002

- Blood Pi declines after LPS administration in a dose dependent way Waldron et al., 2003

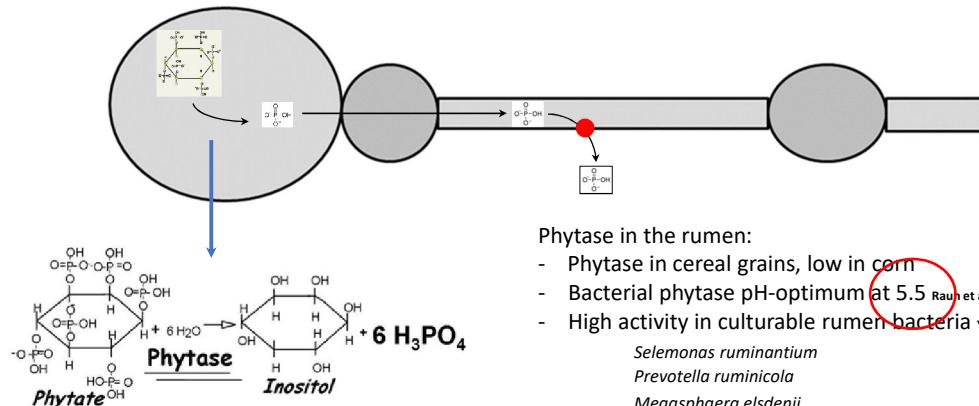

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS and hypophosphatemia

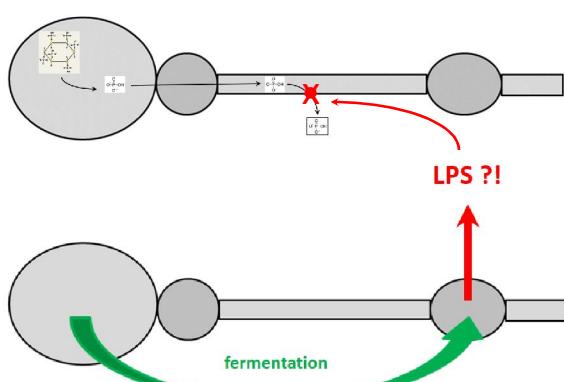

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS and hypophosphatemia

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS: inflammation and hypophosphatemia

Limited data on effect of inflammation on intestinal Pi absorption Chen et al. 2009

- in mice: induction of colitis reduces small intestinal Pi absorption
- in mice and rats: induction of colitis reduces NaPi-IIb protein and NaPi-IIb mRNA in small intestines
- in Caco-2 cells: TNF $\alpha$  reduces Pi absorption, NaPi-IIb protein and NaPi-IIb mRNA

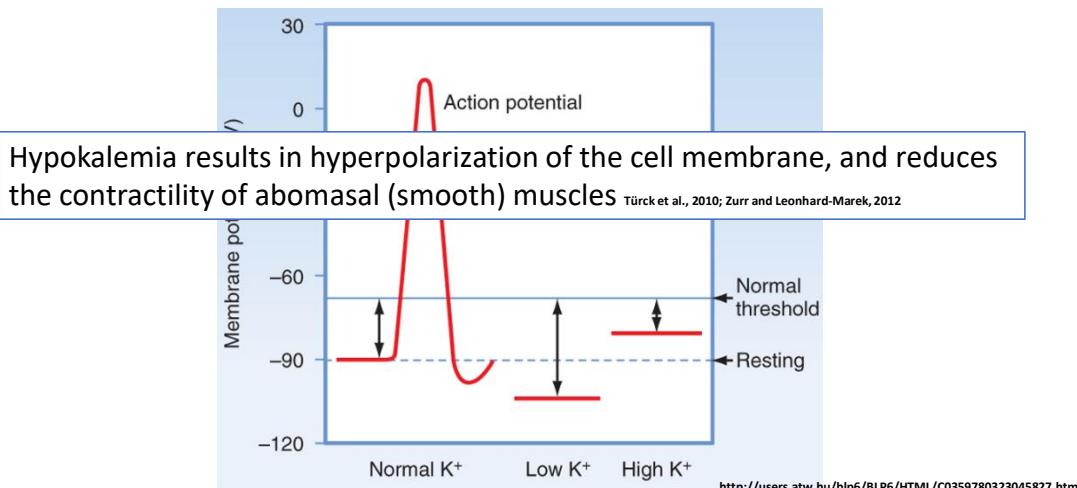

### Dry cow: diets low in CP/RDNB:

- Fermentation shifts from rumen to the hindgut Jost et al. 2013
- Reduces fecal pH Aschemann et al., 2012; Jost et al., 2013
- Hindgut dysbiosis?! → LPS-translocation?! → proinflammatory cytokines?!

Fresh cows: sudden transition to lactation diet → rumen dysbiosis

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS and hypokalemia

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS and hypokalemia

- All cases: recumbent or severely weak cows

- Correa et al. 1993: hypocalcemia, dystocia, still birth, retained placenta
- Sielman et al. 1997: iatrogenic DC: treated with *isoflupredone acetate*. Fever, metritis, diarrhea, LDA
- Sattler et al. 1998: all cases with protracted, often infectious disease

Hypokalemia is the result of another disturbance resulting in decreased DMI  
Hypokalemia is no cause of DCS

- Seyrek-Intas et al. 2013: mild and temporal hypokalemia in cows with dystocia, normokalemia in cows with eutocia
- Schneider et al. 2016: Healthy periparturient (D1-3) cows: no hypokalemia.

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

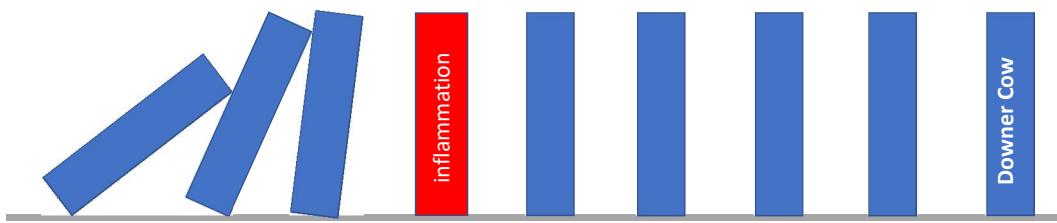

## DCS and other associated disturbances

- Decreased insulin sensitivity Guyot et al., 2017
- Fatty liver Kalaitzakis et al., 2010
- Prepartum indications of an APR Zebeli and Ametaj, 2011

DCS is the result of a preceding inflammation  
in a cascade of events

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

## DCS; domino effect

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

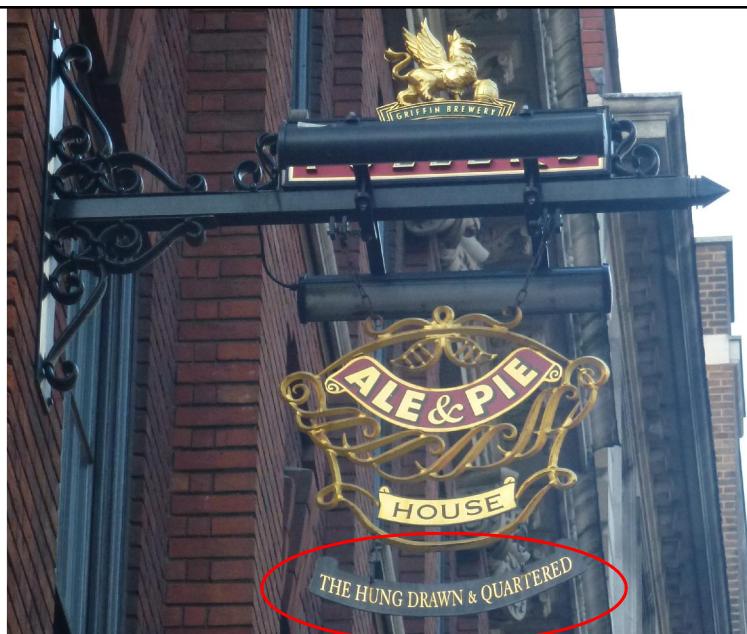

## Complicated hypocalcemia and DCS

- First: prevention of inflammation

- Antepartum : prevention of rumen dysbiosis and hindgut dysbiosis
- Partum: prevention of lacerations of the birth canal
- Early postpartum : prevention of
  - Rumen dysbiosis and hindgut dysbiosis
  - Mastitis
  - RFM and metritis (roots lay antepartum)

- Second: prevention of hypocalcemia

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands

Rik Hendriks, VEERkracht Dairy Congress 2019, the Netherlands
